

qualtrics^{XM}

Elise Bushnell

start & end dates: June 20th through September 9th, 2022

location: Remote (in-person for one week) based out of Provo, UT

personal & professional growth

I learned that both attitude and attention to detail are everything. On my last day, my team lead told my entire team that they “should all be more like Elise” because of the succinct updates I delivered every morning in stand-up. Another coworker told me I was “the most professional yet least experienced team member”, due to my attitude and the manner in which I carried myself.

description

I completed two projects this past summer- the first being adding the ability to create a segment to the advanced search window in XM Directory. The second project consisted of adding the ability to export contacts to three different locations within XM Directory.

technical skills

The Search To Segment feature I added existed in its own component. This meant that data had to be passed back and forth between this new component and the pre-existing advanced search component, without using a service. In order to do so, I used input and output in Angular.

ethics & society

My projects increase usability of segments, which help businesses maximize customer data, and therefore profit. Globally, this results in a more productive economy.

connection to UCSD

I used my knowledge of memory diagrams to create detailed projects and solidify my understanding of new concepts. I will use my professional communication skills to maximize interactions with professors as well as other students.
